2.1.0.1 Environment & Energy Conservation Policy

The Company accords a high priority to the protection of the environment and conservation of energy, and the commitment to this policy is further expressed by holding and maintaining an ISO 14001 certification.

One of the Company's vital goals is to reach zero spills to the sea by continuously improving its procedures, practices and controls.

Compliance with all applicable national and international conventions, laws, legislation and regulations is regarded as a minimum requirement.

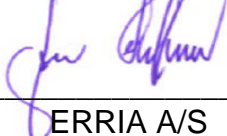

Shore staff is appointed to ensure safety and environmental protection in all aspects of operation of ships. Risks are anticipated, analysed and discussed with those affected and monitored to ensure proper control and corrective actions as required.

We train our personnel to ensure they have a positive attitude towards pollution prevention and energy conservation.

Overall, no action should be taken that in any way could jeopardise the safety of human lives, that be on board the ship, or other ships, or ashore. In all circumstances whatever may be the intended merit, the safety of human lives and environmental-protection must overrule any commercial interests.

Reference: ISM Code Ch. 2 and ISO 14001 (2004).
